"IT MAKES OUR JOBS EASIER,
SAVES TIME AND IMPROVES OUR
CAPABILITIES."

Waverly College TAS support staff member Paul Stack with Felder's Kappa 400 Xmotion.

AS part of a large scale construction and refurbishment program at Waverly College in NSW, a multi-story Technological and Applied Studies Centre (TAS) recently built to provide students with modern facilities.

The TAS department had the opportunity to replace some of the older woodworking equipment during relocation, so it allocated money and began researching machines that would suit its requirements.

It needed a supplier that could provide high quality machines with long-lasting precision and reliability; machines that were modern, safe and easy to use; and outstanding after sales support.

Experienced Waverly College TAS support staff member Paul Stack said that the department visited a number of other schools to see what they were using, and came across the panel saw from woodworking machine specialist Felder.

"[The school] gave some good taps on the machine, and it did what we wanted at a cost which we could afford," he said.

"Even though there were some other machines at a similar price we went with the Felder machine."

Felder wood working machines are all

developed and produced in Europe at the Groups factories at Hall in Tirol, Austria.

"With many patents, highly developed products and innovative detailed solutions, the Felder Group is the leading provider worldwide in the wood working machinery sector."

A precise production process, strict quality, and ongoing training and education of employees ensure that customers and users can expect a woodworking machine with outstanding quality and many, many years of performance.

Mr Stack said that the new Felder panel saw allowed the Waverly College TAS department to move on from an old analogue system - which required manual movements and adjustments using hand and sight - to a digital age where measurements were inputted and the machine adjusted accordingly.

"We've now bought three machines from Felder - a panel saw, a thicknesser, and a jointer," he said.

"These machines allow us to do a better job and make the process quicker. It makes our jobs easier, saves time and improves our capabilities."

Felder's service centre and consultation

team are available to provide all the information for making well-informed decisions; this means customers can be assured that Felder will always select the right woodworking machines, tools and accessories for their individual needs.

Because some TAS departments have limited space and budgets, Felder will visit schools to see what their individual requirements are, and will only offer machines that are suitable.

Felder's internally-trained technicians can also travel to customer workshops to carry out repair and maintenance work quickly and reliably, and the company constantly has 98 per cent of all accessories, tools and vacuum equipment in stock for convenience.

Mr Stack said dealing with Felder before, during and after the sales process has been very easy.

"[Felder area sales manager] George Cycon came out on site over the course of our construction, just to check there was enough room for the machine and to work out how they were going to have the machine physically installed," he said.

"It's been just less than a year since we bought

the equipment. We've bought a couple of other spare parts and additions to the machine, and they have been very helpful."
